

江山市饮酒现状调查报告

Alcohol Use in Jiangshan: Survey Report
& Response Options

Ted Miller & Chris Ringwalt

HBSA

miller@pire.org

301-593-7471

Surveys

- **HBSA/Gallup N = 2984 adult respondents in June 2018**
 - N = 1491 Jiangshan
 - N = 1493 Lanxi
- **Gallup N = 3000 adult respondents in November/December 2016**
 - N = 1500 Jiangshan
 - N = 1500 Lanxi
- **School surveys in May 2017 & September 2018**
 - ABI N = 2621 in 2017, HBSA N = 1583 in 2018
- **ABI intercept survey in May 2017**
 - N = 526 regular drinkers ages 18-50 in Jiangshan

Adult respondents by age group, 6/2018 (6% under 30 in 11/2016)

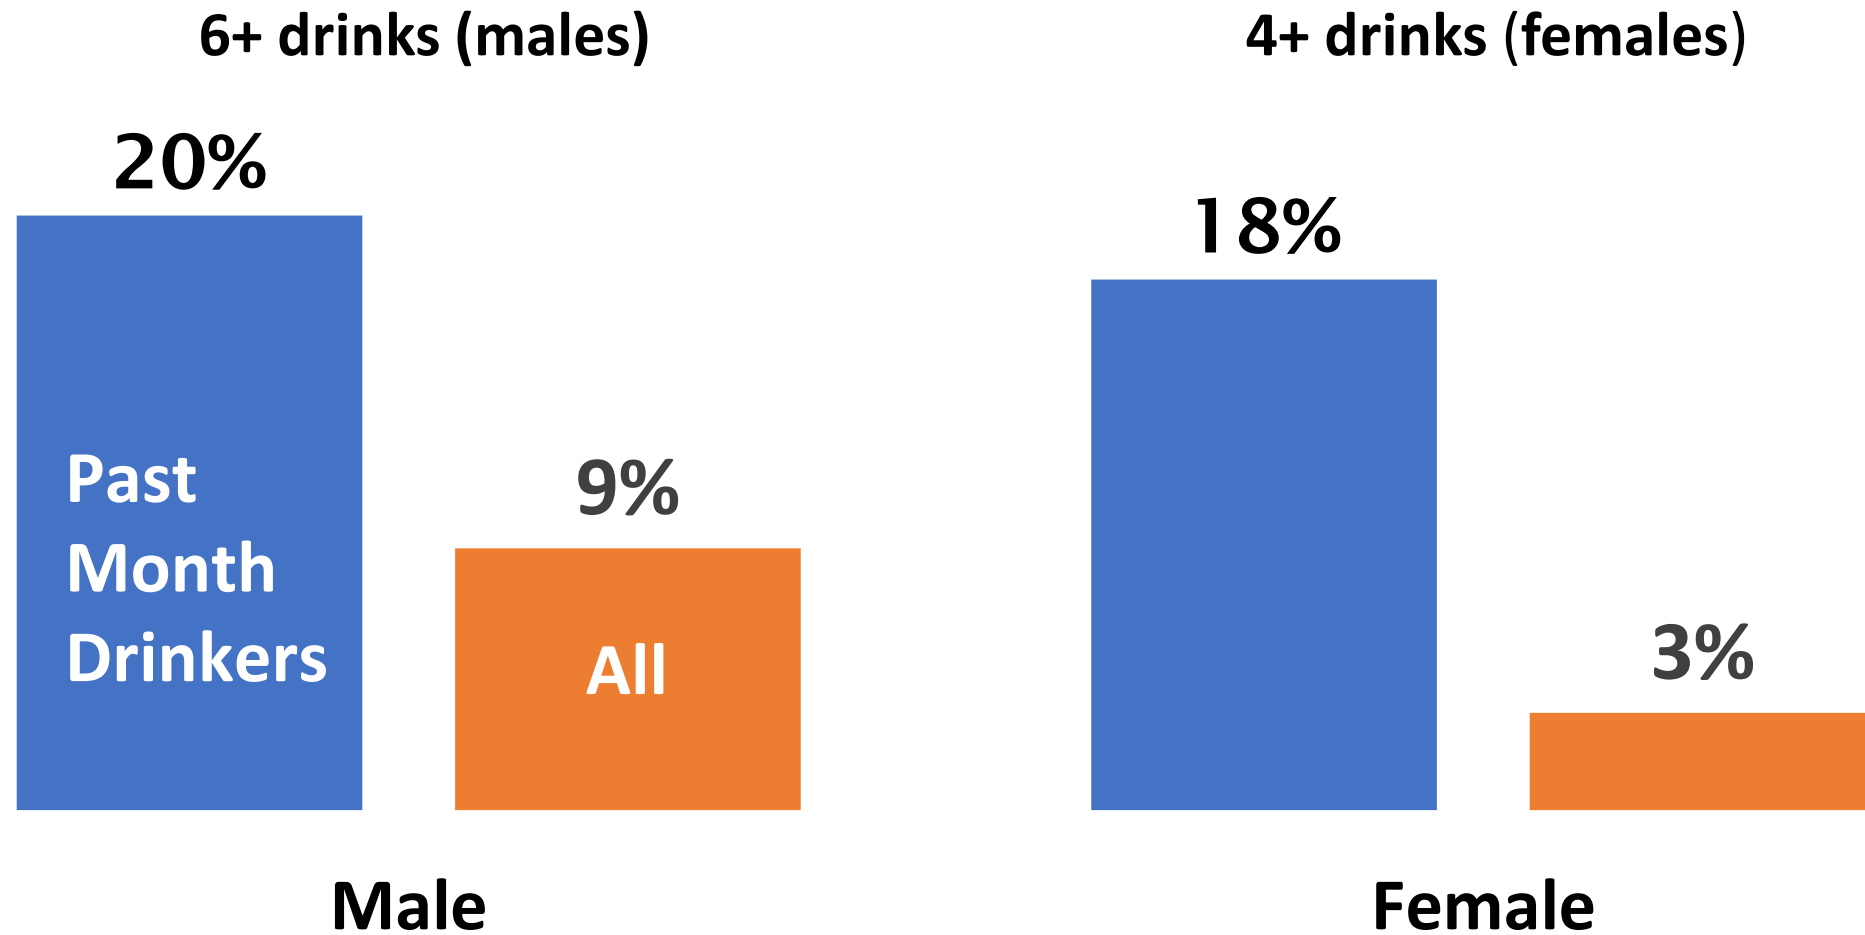

酒精类产品消费行为习惯（成年人）

Alcohol Products Consumption Habits and Behaviors (Adults)

Adult past-month alcohol use by sex

Prevalence of heavy drinking in the past 30 days by sex – US 28%, belg 34%,

% Drank Heavily in the Past 30 Days by Country

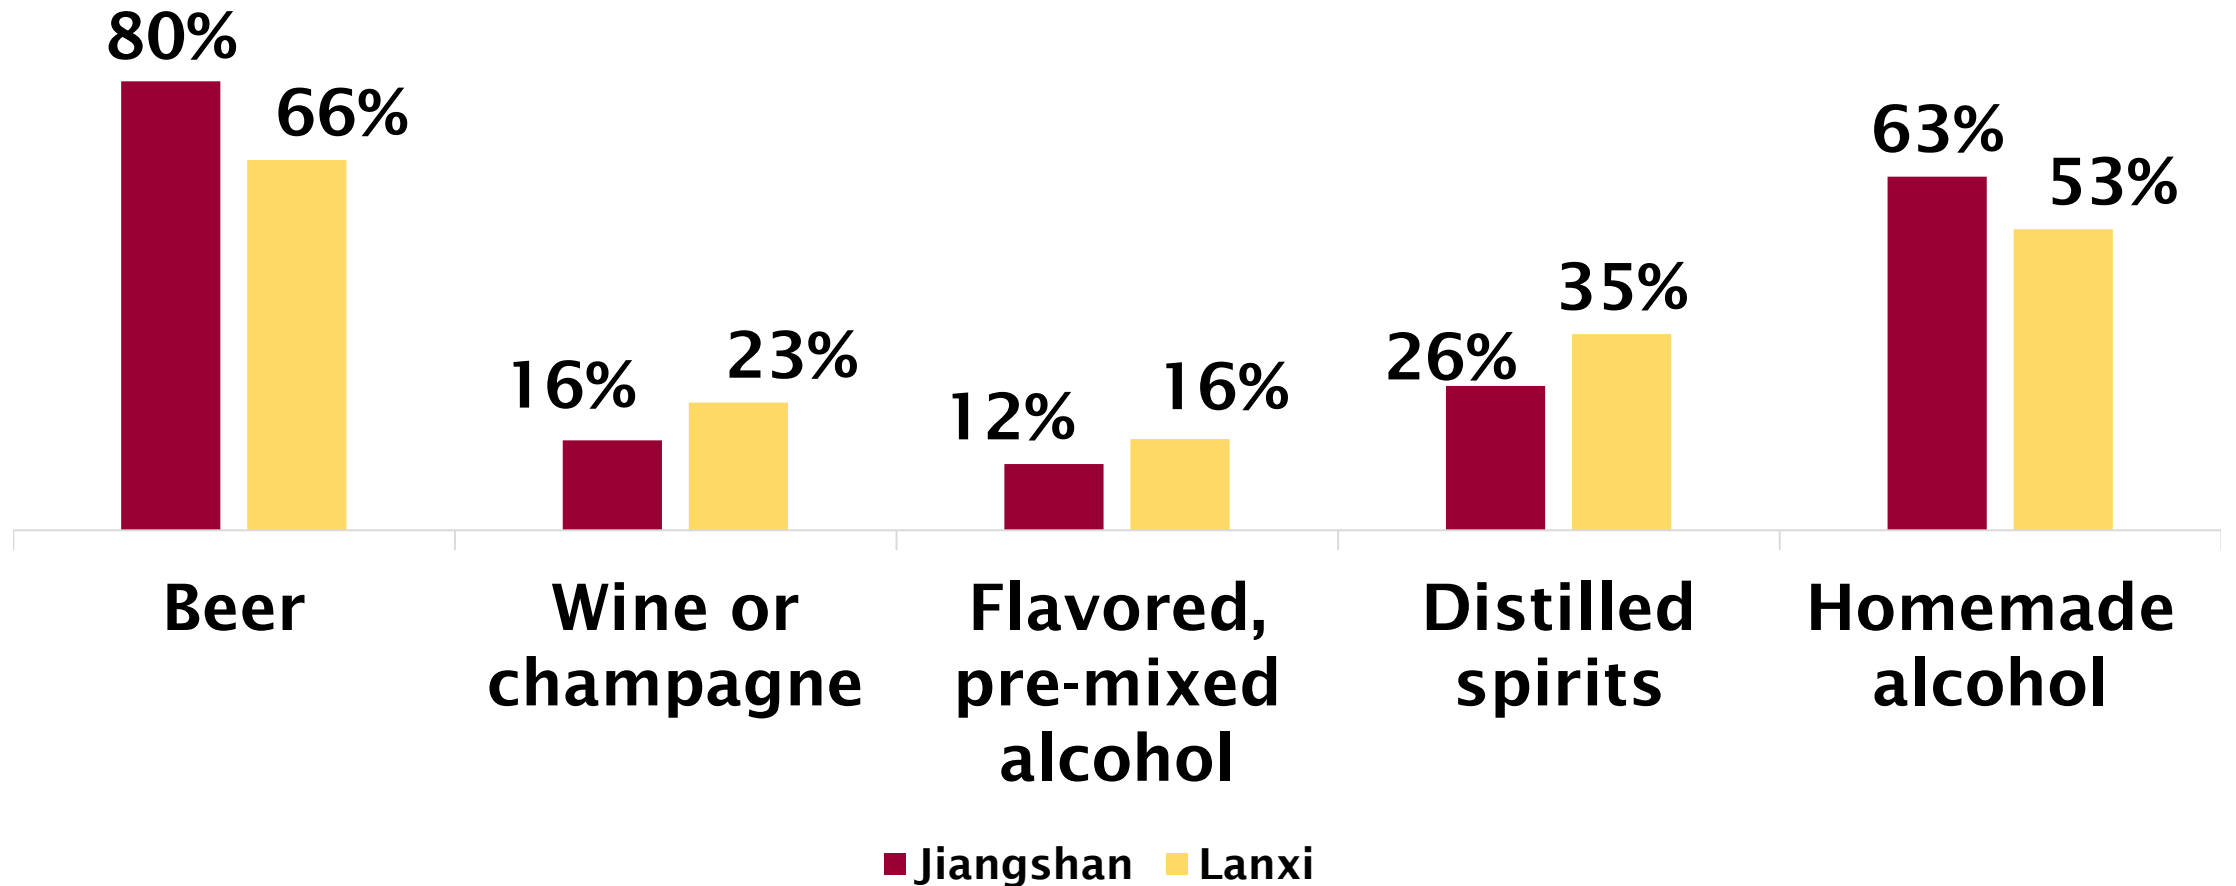

Adult past-month alcohol use by age group

Prevalence of heavy drinking in the past 30 days (among adults who drank in the past 30 days) by age

Prevalence of different types of alcohol consumption in the past 30 days (of those who drank in the past 30 days)

家是最主要的饮酒场合。男性及18-29岁人群在餐厅/娱乐场所饮酒的比例高于其他人群。
Respondents mainly drink at home. Compared with other respondent groups, a higher proportion of males and those between 18-29 years old drink in restaurants and entertainment venues.

饮酒场合
Drinking locations/occasions

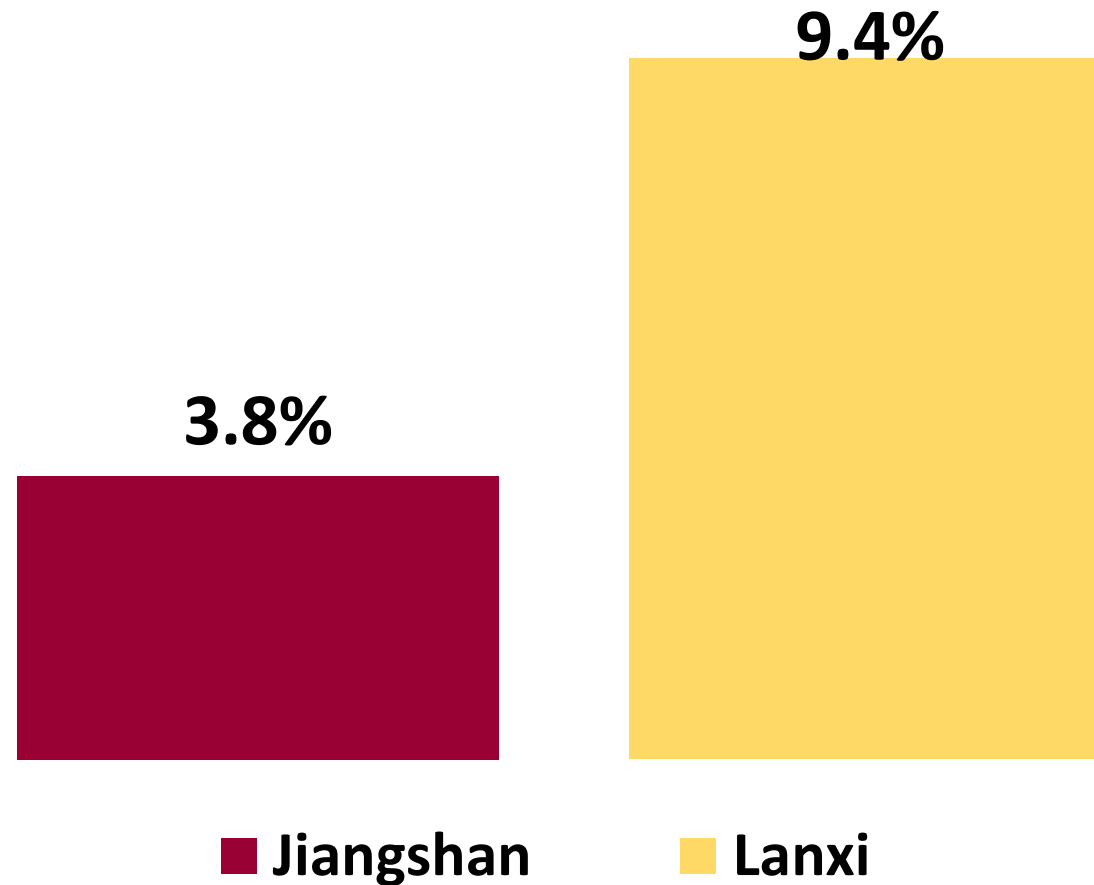

基数: 所有被访者
 Basic Number: All respondents

Prevalence of different types of alcohol problems

Alcohol problems in past 12 months (among adults who drank in the past 12 months): Brazil vs China

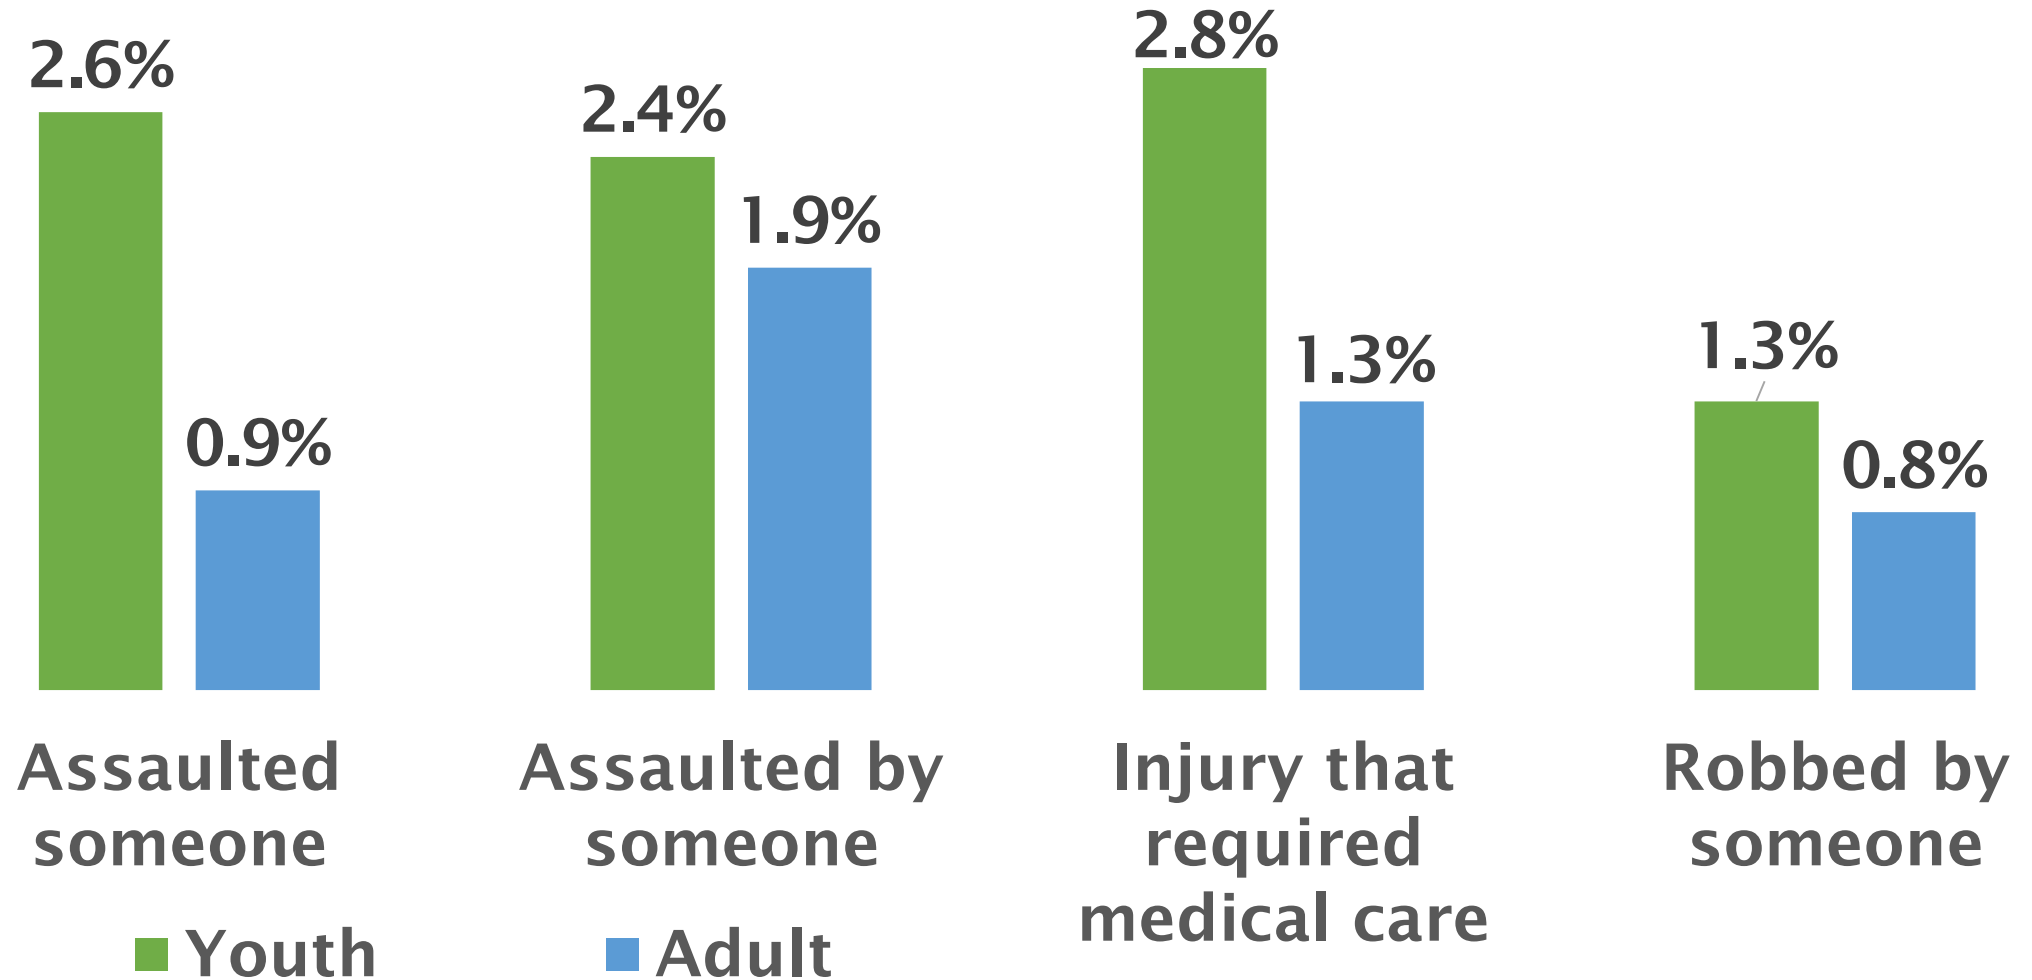

57% of assaults in Jiangshan involved alcohol

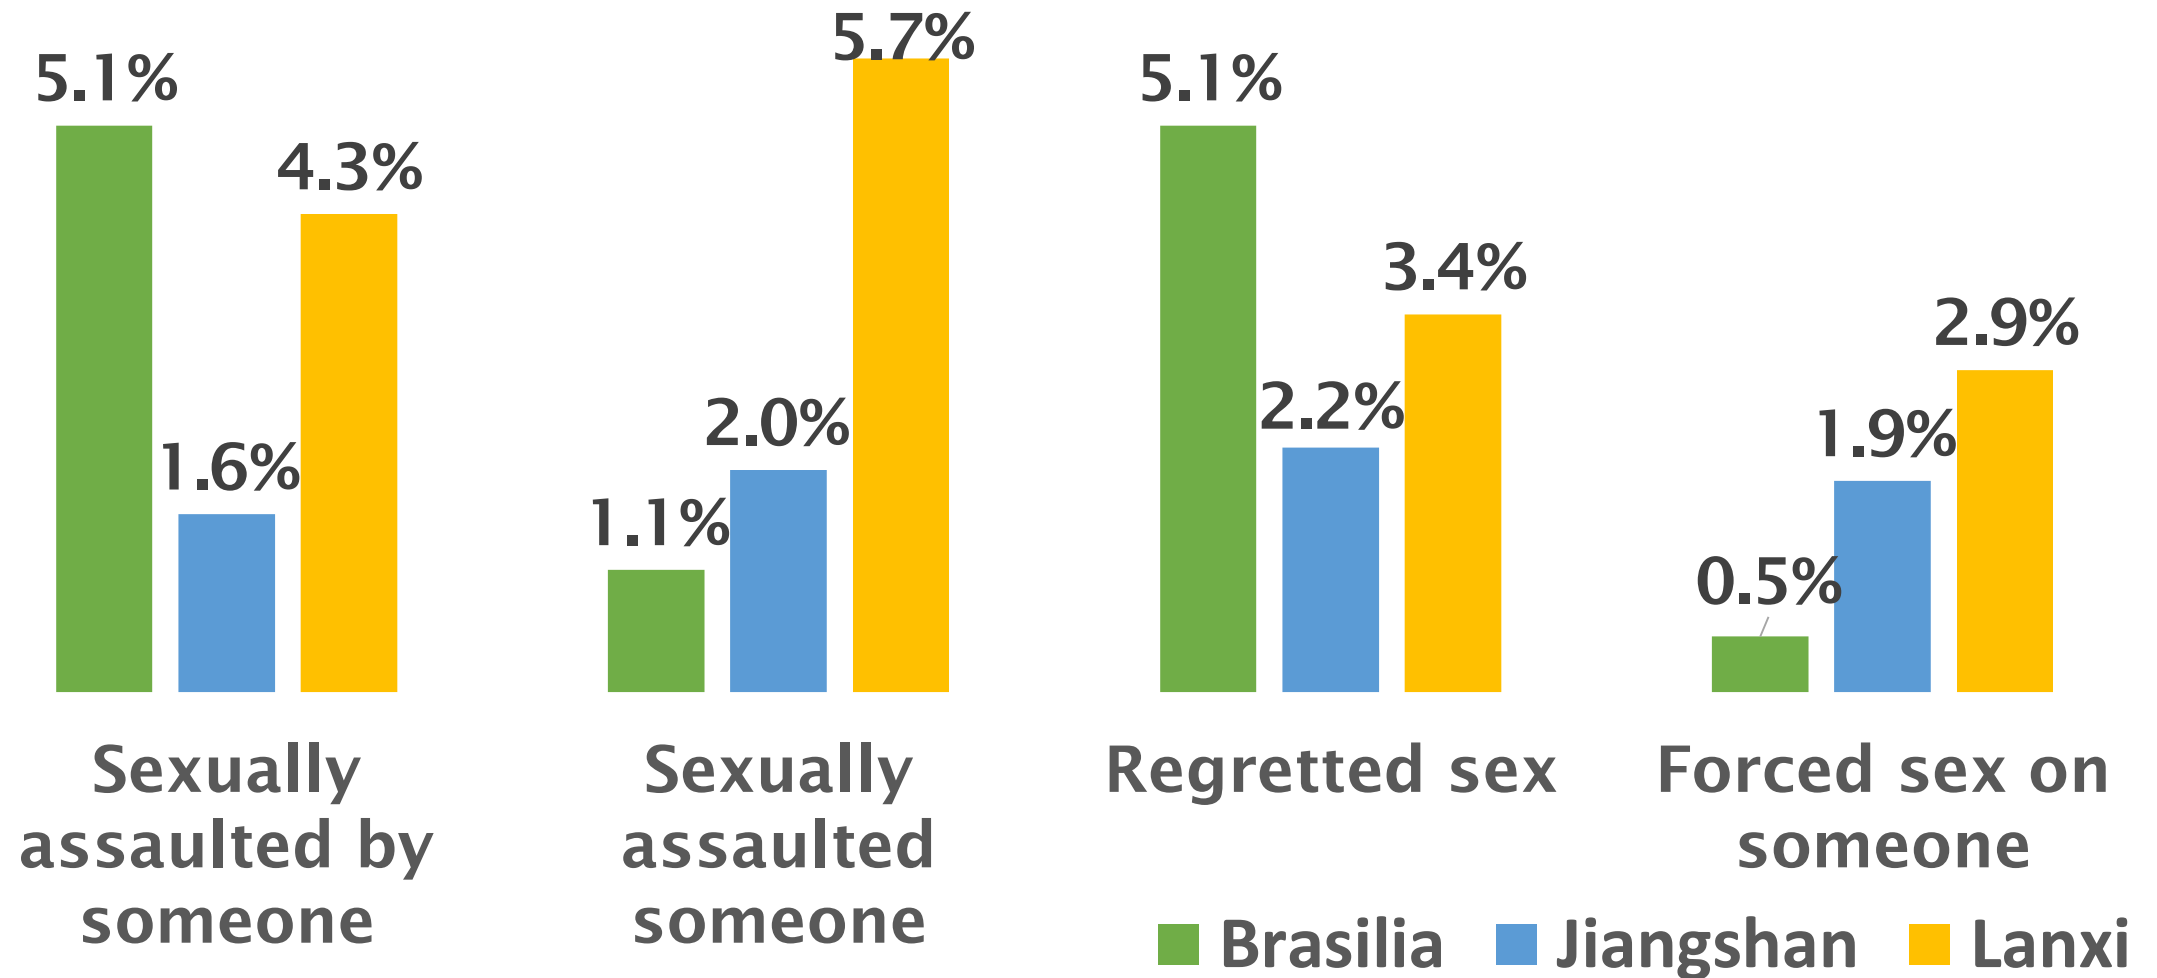

Alcohol problems in past 12 months among adults who drank in the past 12 months: Brazil vs China

Alcohol problems in past 12 months among youth and adults who drank in the past 12 months in Jiangshan

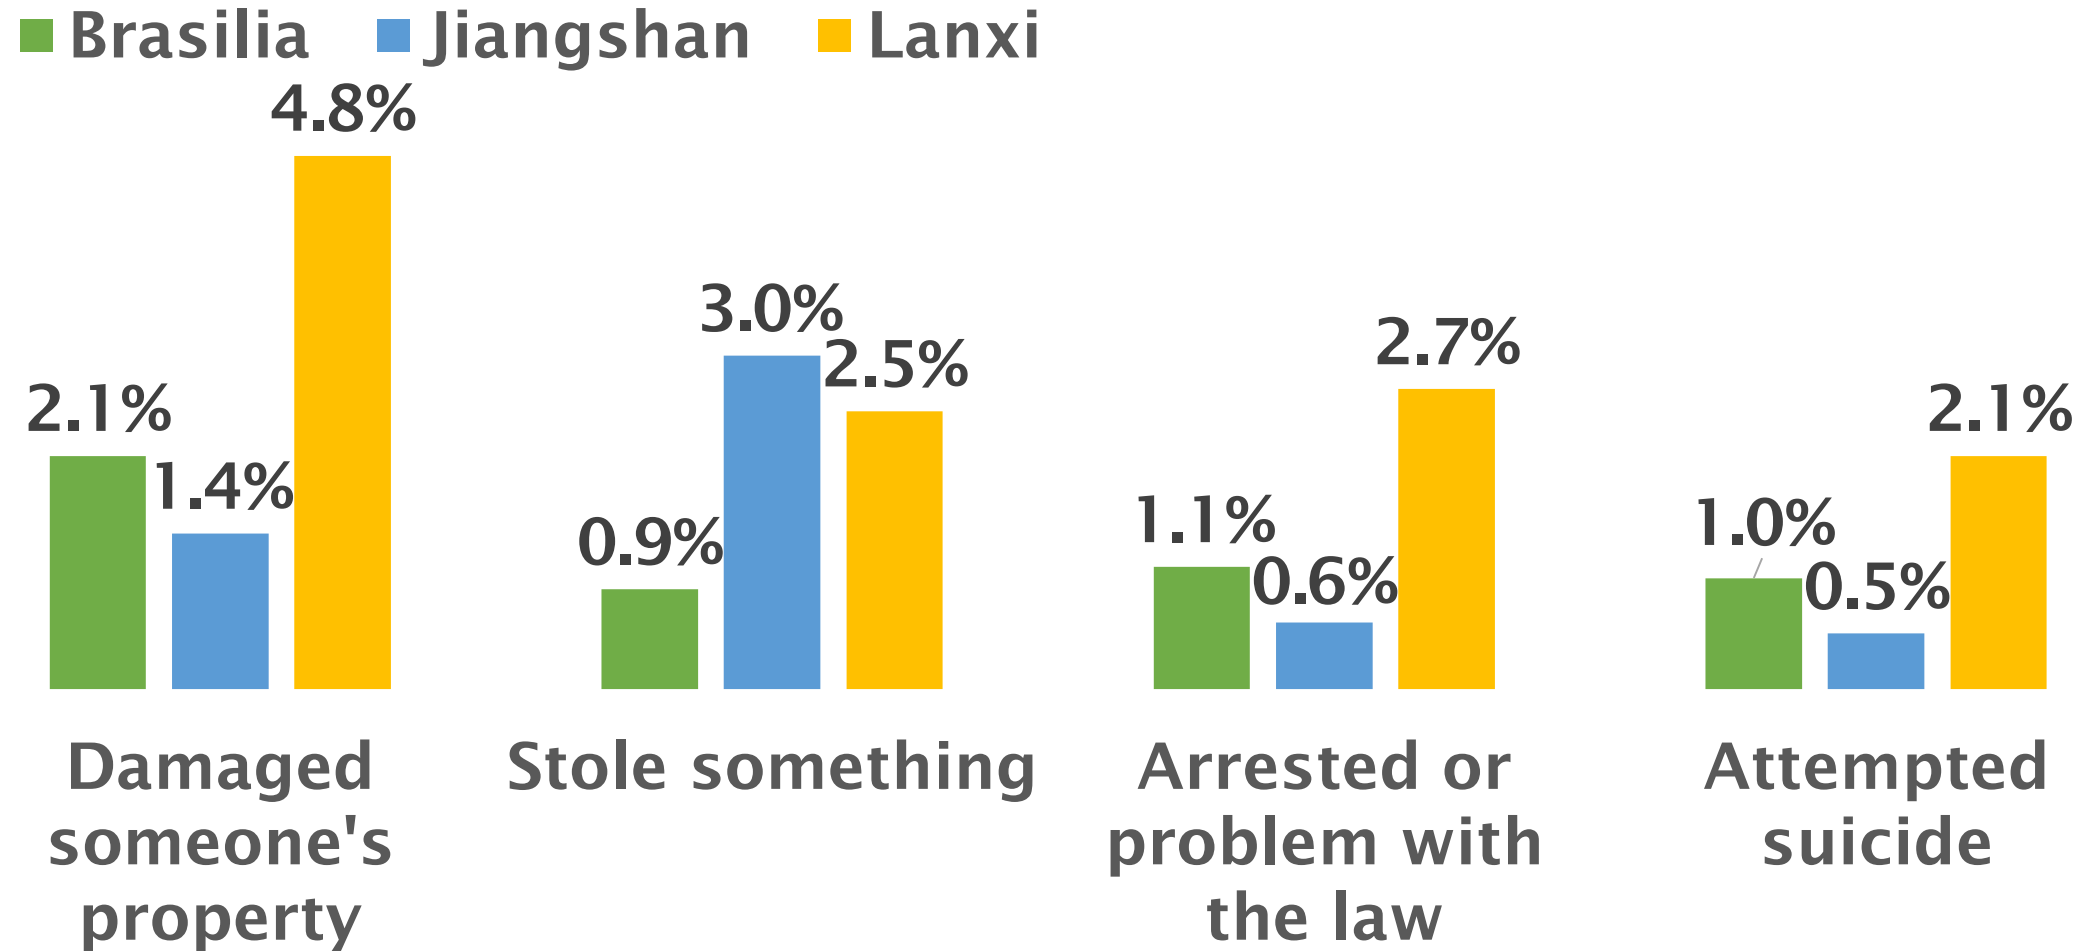

Alcohol problems in past 12 months among adults who drank in the past 12 months: Brazil vs China

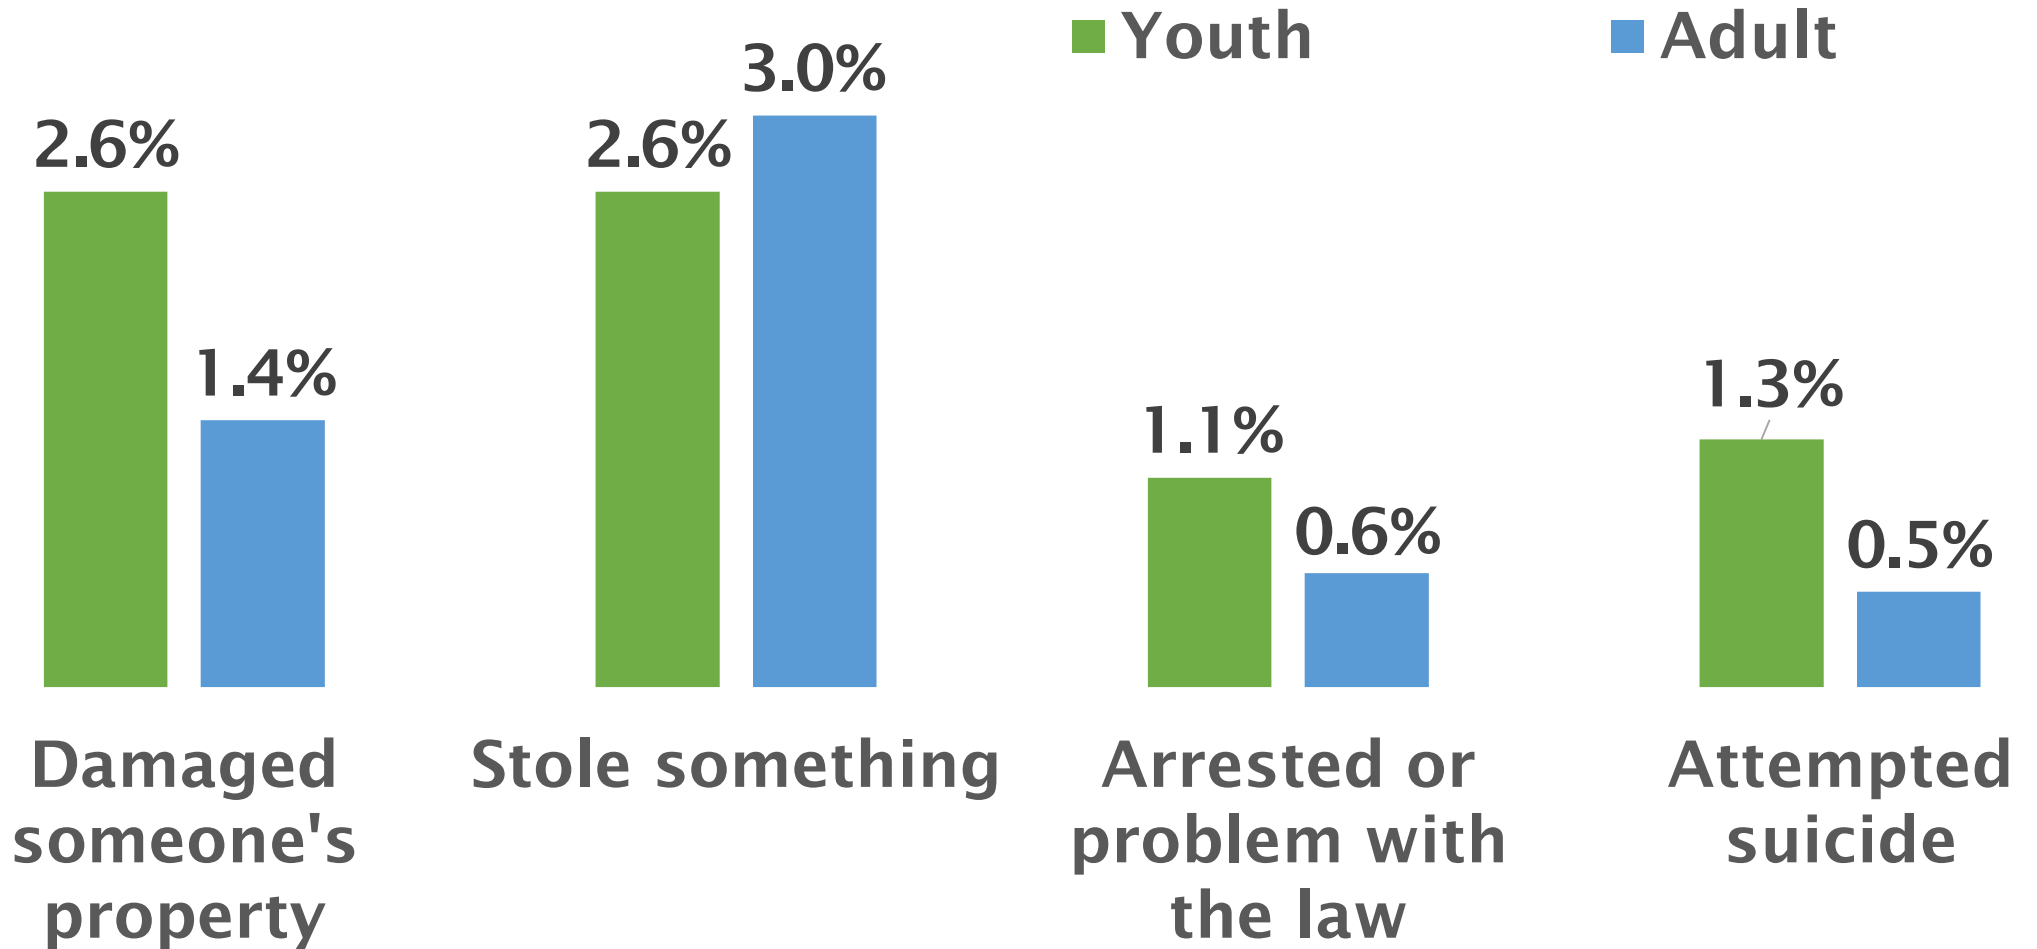

Alcohol problems in past 12 months among youth adults who drank in the past 12 months in Jiangshan

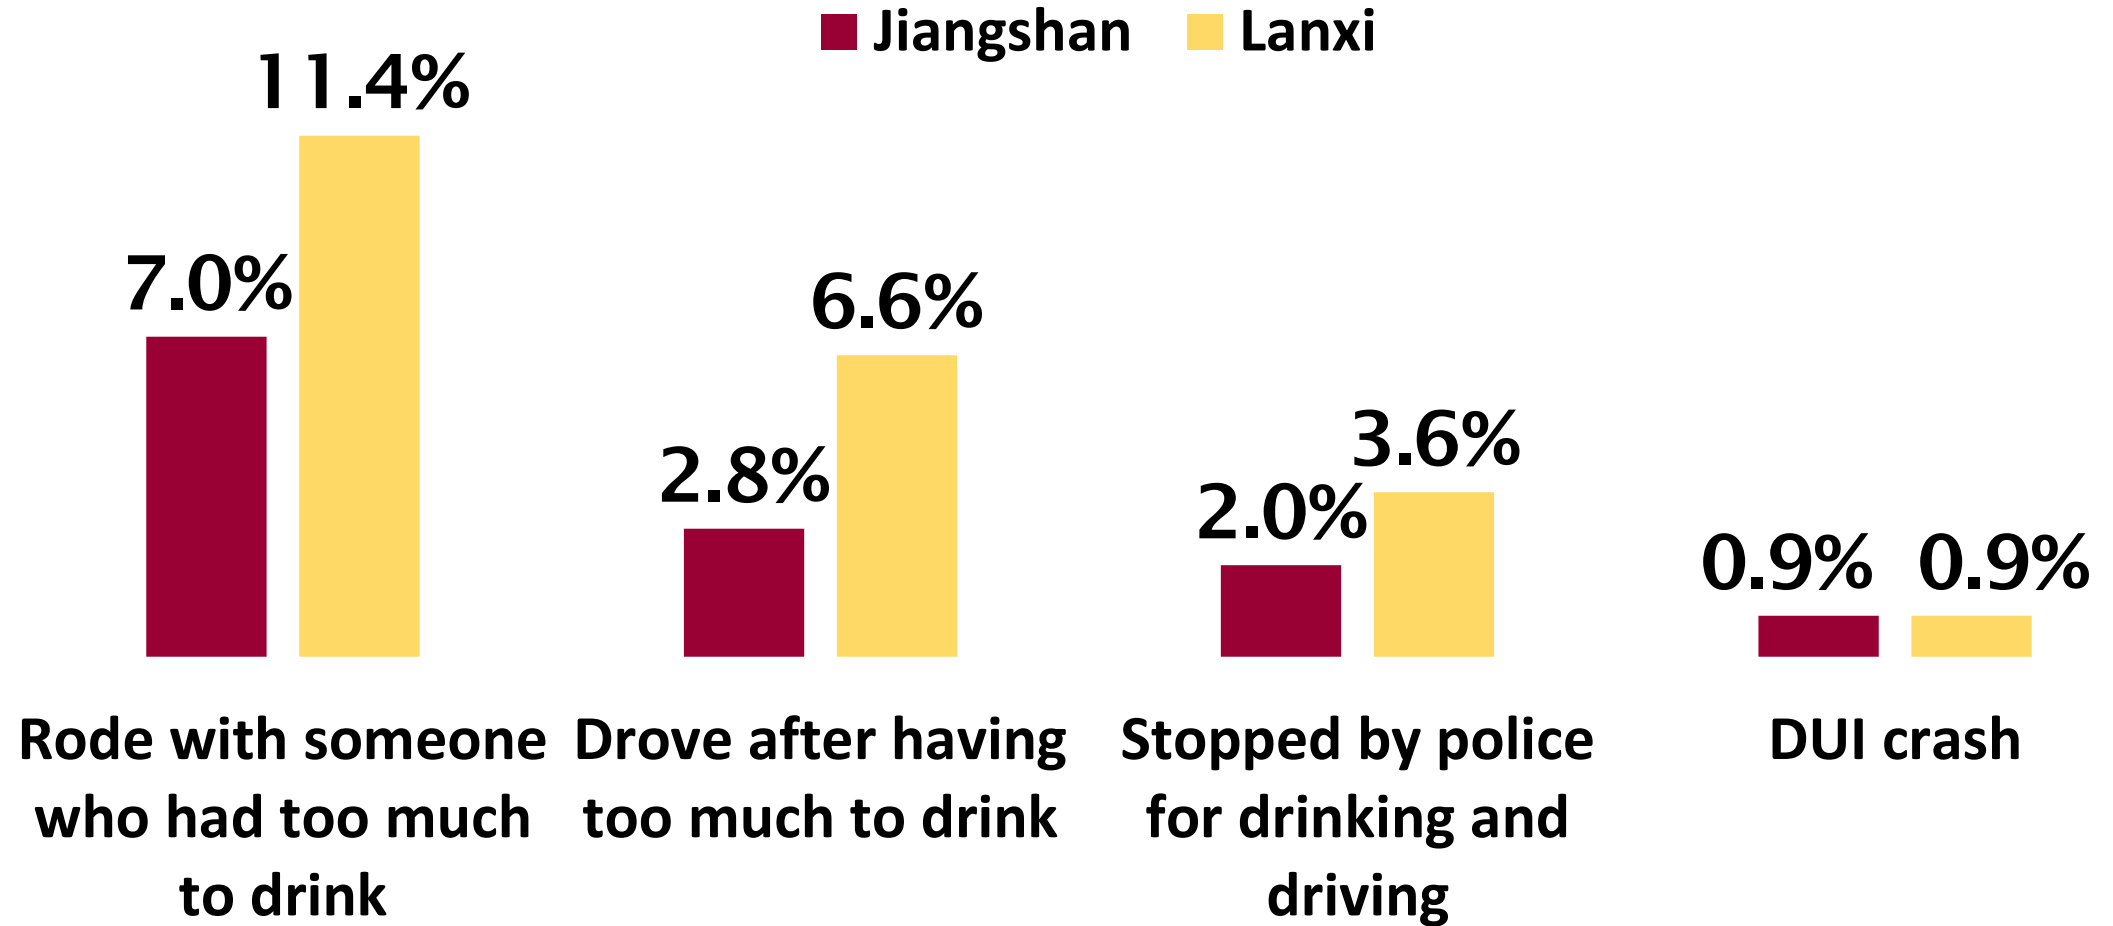

Alcohol problems in past 12 months among adults who drank in the past 12 months: Brazil vs China

Alcohol problems in past 12 months among youth adults who drank in the past 12 months in Jiangshan

Prevalence of different types of alcohol problems in the past 12 months among adults who drank in the past 12 months

26% of crashes in Jiangshan involved alcohol

Jiangshan Has High-Intensity Enforcement

% of Those Who Drove Drunk in the Past Year Who Police Stopped for Drink-Driving in the Past Year

Screening & Brief Intervention

>=2 alcohol abuse symptoms by age group (adults who drank in the past 12 months)

In the past 12 months, did you talk about your health with a doctor, nurse or other health care worker? (adults who drank in the past 12 months)

21%

**In the past 12 months, did a Doctor or Healthcare Worker ask you about how much alcohol you drink?
(adults who drank in the past 12 months and talked to a health care professional)**

30%

**In the past 12 months, did a Doctor or Healthcare Worker advise you to reduce or stop drinking alcohol?
(adults who drank in the past 12 months and talked to a health care professional about their drinking)**

69%

Drug Use to Get High Is Minimal

Less than 2% of respondents

Mostly prescription misuse

How We Measure Harmful Drinking

WHO & UN Worldwide Goal: Reduce Harmful Drinking by 10%

One objective of ABI & ABIF Global Smart Drinking Goals Initiative is to forge public-private partnerships which meet that goal in 6 cities

Primary Evaluation Measure

**Alcohol-related Harm
Reduced =**

**Years of Healthy Life gained
(or their financial
equivalent)**

Harm prevented or treated	Years of Healthy Life
One year of underage drinking	0.030
Consumption of 1000 drinks among continuing underage drinkers	0.017
One year of binge drinking	0.055
Consumption of 1000 drinks by continuing binge drinkers	0.041
One drink driving crash	0.343
One violent crime	0.218
One property crime	0.007
One alcohol use disorder	0.431

Where Did Those Come From

- **My published US studies**
- **Costs of Alcohol-Involved Crashes, United States, 2010, E Zaloshnja, T Miller, L Blincoe, *Annals of Advances in Automotive Medicine*, 57, 3-12, 2013.**
- ***Substance Abuse Prevention Dollars and Cents: A Cost-Benefit Analysis*, T Miller, D Hendrie, Rockville MD: Substance Abuse and Mental Health Services Administration, DHHS Publication No. (SMA) 07-4298, 2009.**
- **Societal Costs of Underage Drinking, T Miller, D Levy, R Spicer, D Taylor, *Journal of Studies on Alcohol*, 67:4, 519-528, 2006.**
- **The Costs of Alcohol and Drug-Involved Crime, T Miller, D Levy, M Cohen, K Cox, *Prevention Science*, 7:4, 333-342, 2006.**
- **Calculations based on updates of those studies**
- **Where possible, will create country-specific estimates (e.g., YHL lost per death)**

The Survey Shows # of Incidents

- **Multiply times the years of healthy life lost from the table**
- **Alcohol-related illness is computed as drinks consumed times the years of healthy life lost per drink in Zhejiang Province, China (from the Global Burden of Disease study)**

GBD 2016 DALY Collaborators. Global, Regional, and National Disability-Adjusted Life-Years (DALYs) for 333 Diseases and Injuries and Healthy Life Expectancy (HALE) for 195 Countries and Territories, 1990–2016: A Systematic Analysis for the Global Burden of Disease Study 2016, *The Lancet*, 390:10010, 1260-1344, 2017.

Harm Calculation Example

Harm Calculations: YHLs saved = # DUI crashes reduced * .343 YHL/crash

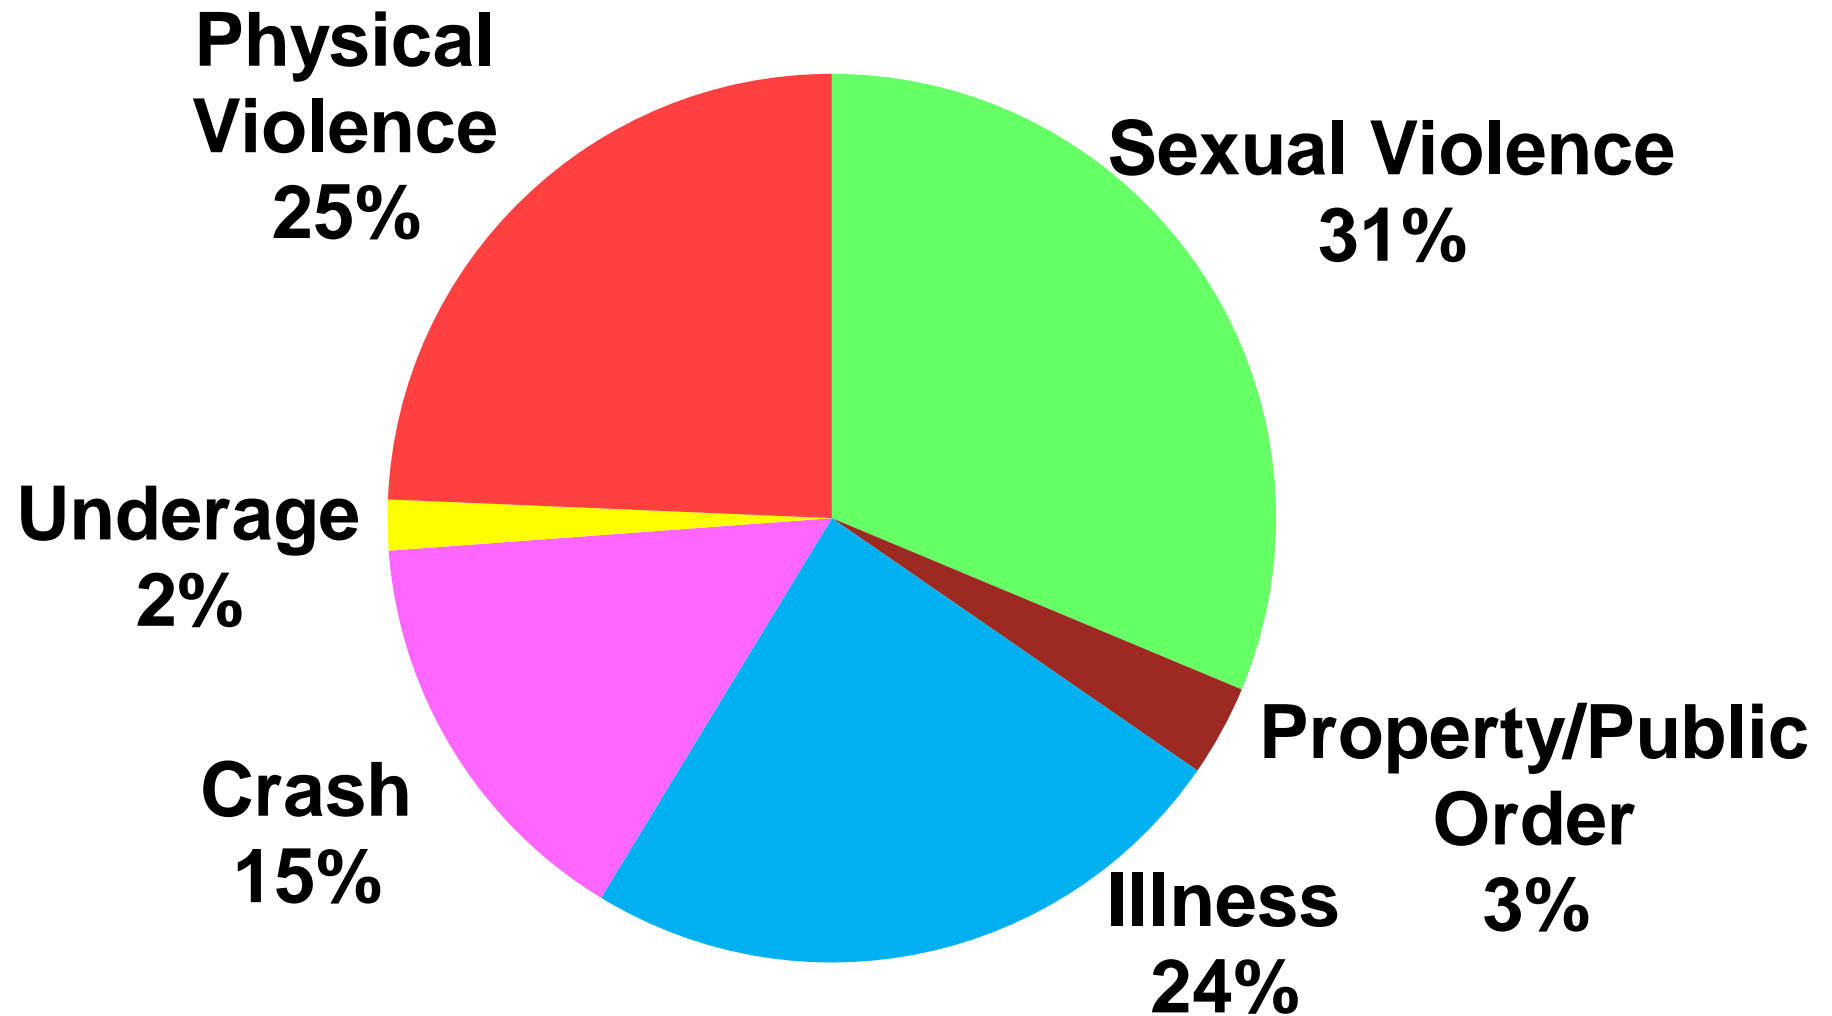

% reduction = YHLs saved / total YHLs lost to drinking in the city in 2015

The goal is a 10% reduction in that number

EVALUATION STEPS

- 1. Evaluate change in outcomes**
- 2. Use the table to convert changes in outcomes into changes in YHLs**
 - $\text{YHLs saved} = \text{change in outcome} * \text{YHL per unit of outcome}$**
- 3. Compute % reduction in harmful drinking**
 - $\text{\% reduction} = \text{YHLs saved} / \text{YHLs lost to harmful drinking in the city pre-intervention}$**

Harmful Drinking Burden in Jiangshan: 3,869 Years of Healthy Life/Year

Jiangshan Baseline Data

Population: 580,000

YHL By Category:

Sexual Violence 1226

Physical Violence 953

Crash 592

Illness 963

Property 132

Underage 72

Incidents By Category:

Sexual Violence 2,731

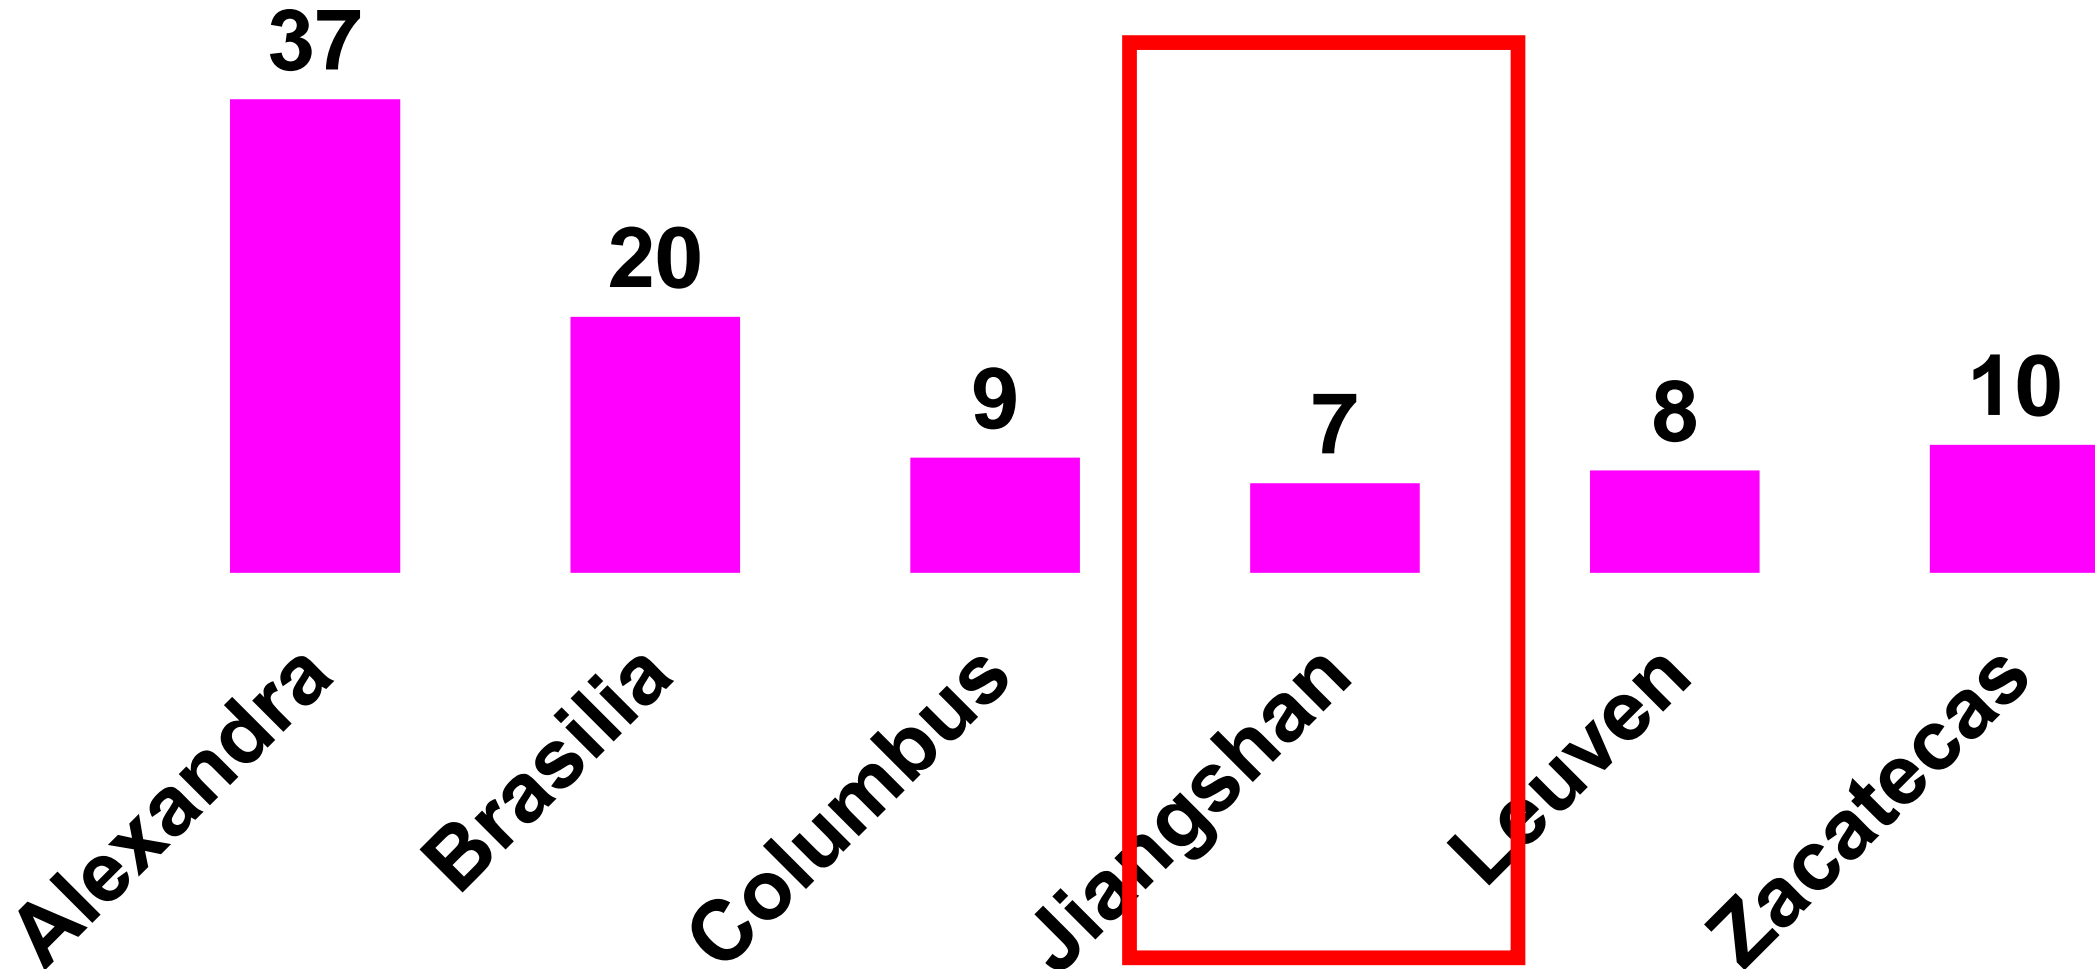

Physical Violence 8,285

Crashes 1,726

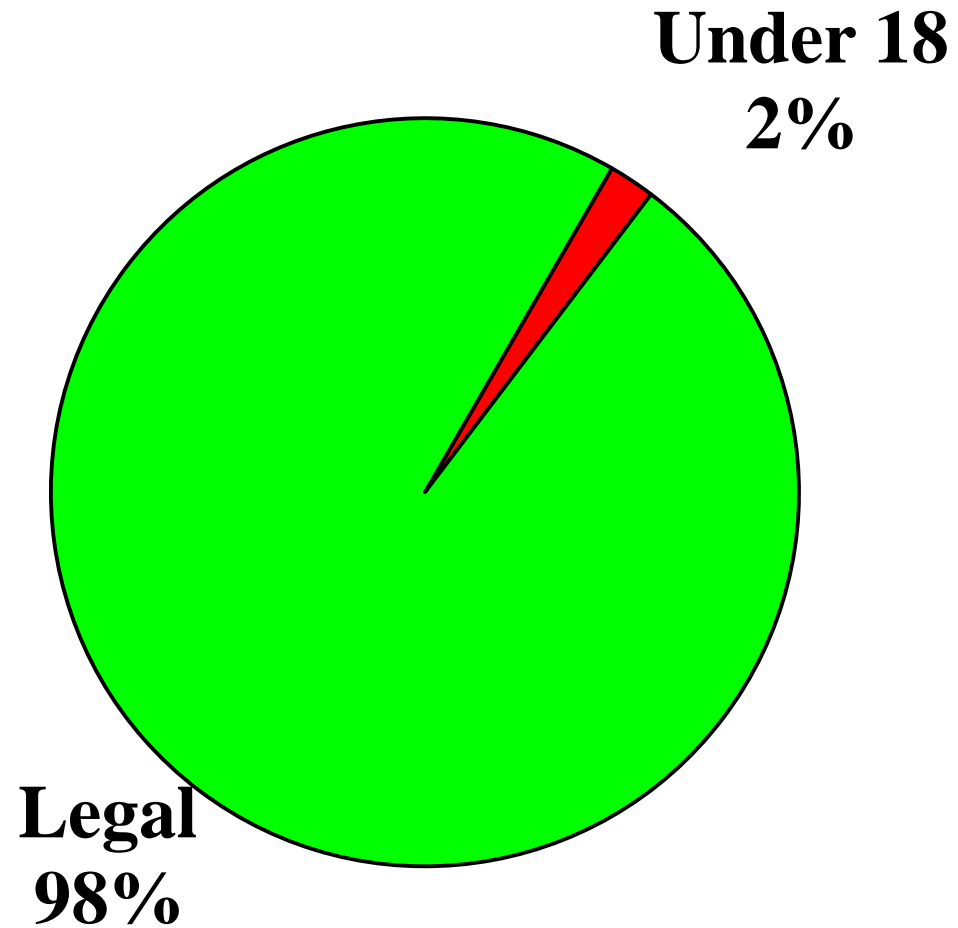

Years of Illness 2,235

Property Crimes 18,792

YHL Lost to Harmful Drinking per 1000 Population

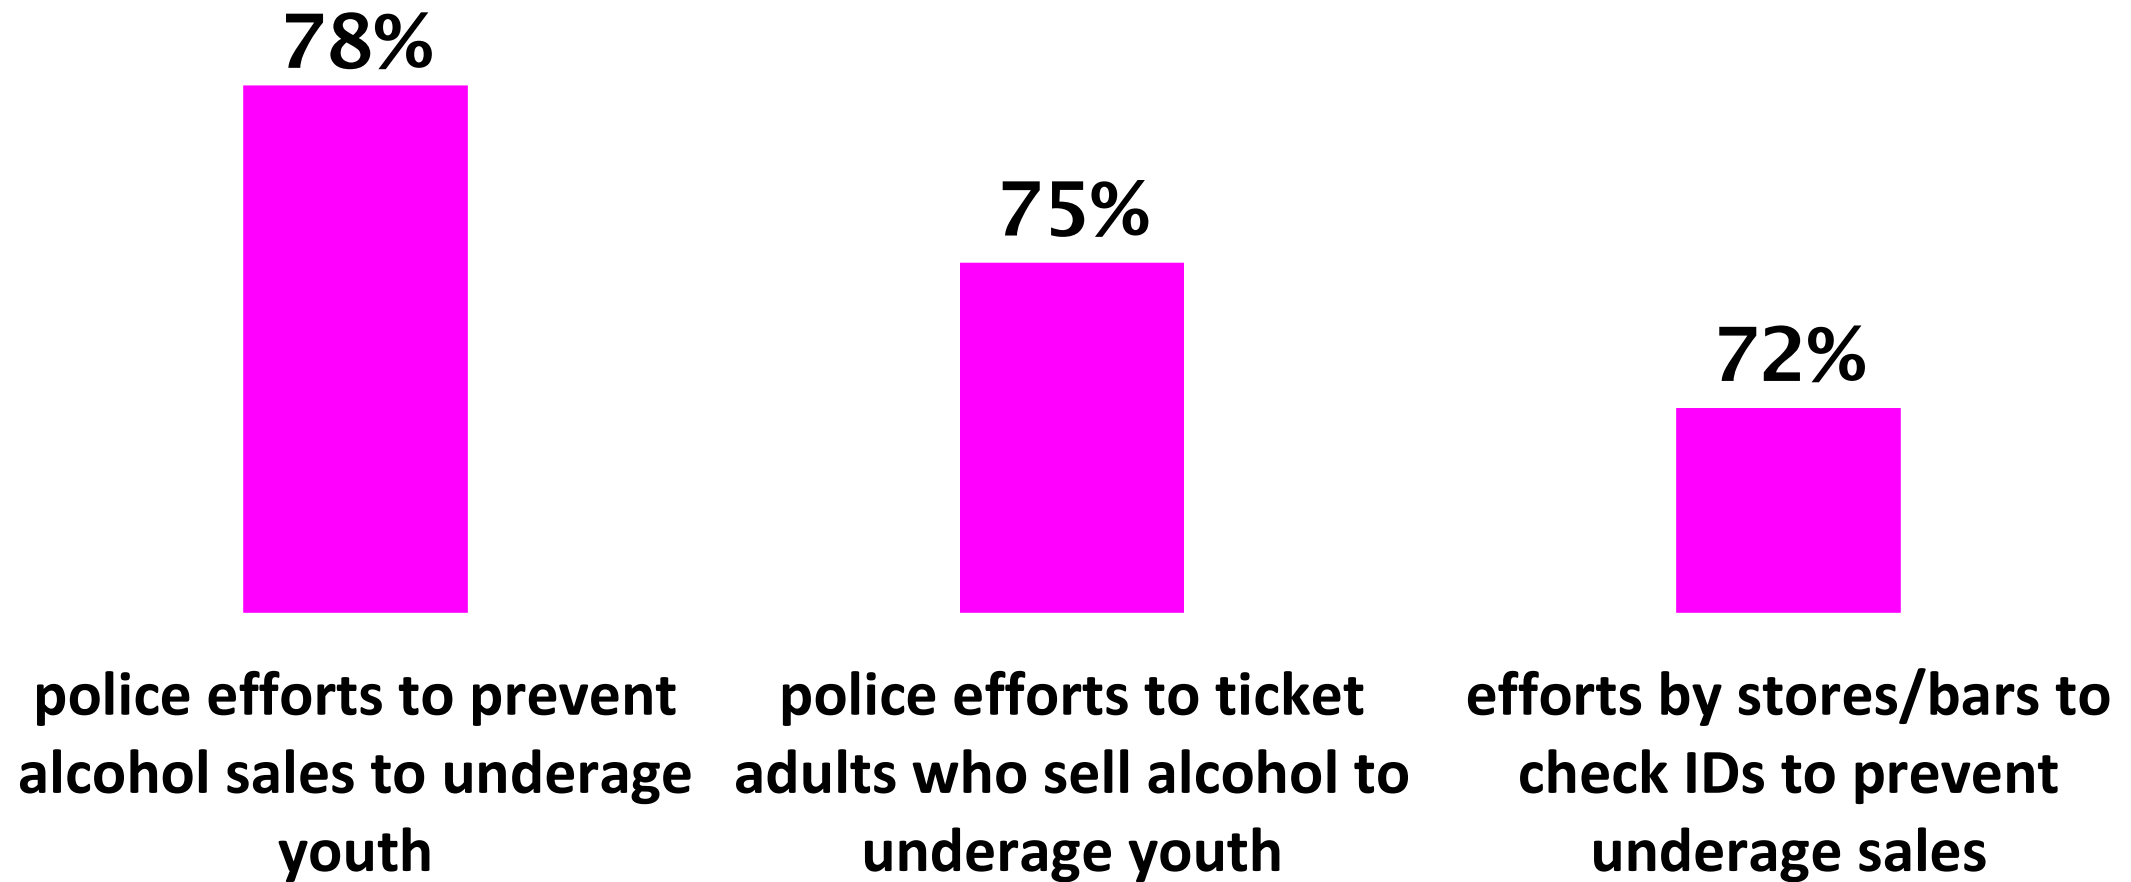

2% of Alcohol-Related Harm in the Jiangshan Results from Underage Drinking

Optimistically, the Best Package of Underage Drinking Interventions Might Reduce the Problem by 25%; the Best School Program Is 8% Effective

- **The goal in Jiangshan is a 10% reduction in harmful drinking**
- **At most, underage drinking prevention can achieve 5% of that goal, a school program 1.6% of that goal**
- **If you do anything in this area, I would recommend guarding against the problem worsening**
 - **Make it harder to buy underage**
 - **Sway parental attitudes**
 - **A school-based program is likely to increase problems by making kids curious or challenging them to show they can handle danger**

Adult approval towards increasing:

Adult approval towards increasing:

61%

the minimum drinking age from
18 to 19

84%

enforcement efforts targeting
drivers who are drinking

Drink-Driving Intervention Effectiveness in the United States & Australia: These are additive

Intervention	Effect on DWI	Reduction in Harmful Drinking (Goal =10%)
Administrative License Revocation based on breath test	8%	1.2%
Impound vehicles of drinking drivers	4%	0.6%
Mandatory ignition interlock after first DWI offense	17% car, 0% M/C	1.5% ???
Scary crash media campaign	10%	1.5%

Reach Is Important

- **If you focus on an issue that is only 10% of the problem, a 10% reduction will only reduce harmful drinking by 1%**
- **It is hard to have much impact with individually focused, one-on-one interventions. If your intervention goes to 1% of city residents or students or drunk driving trips, even if it is perfectly effective, it can only reduce that aspect of harmful drinking by 1%**
- **Family-centered programs rarely have good reach**

Responsible Beverage Service: One Name, Many Dimensions; need most or all

Component	Effectiveness (Goal = 10%)
Dram shop liability law	6%
Mandatory server training	17%
Enforced law vs serving intoxicated patrons	11%
Mystery shop underage sales	0.5%
Everything together	25%

- The [Community Preventive Services Task Force](#) finds [insufficient evidence](#) to determine the effectiveness of responsible beverage service (RBS) training programs for reducing excessive alcohol consumption and related harms at the community level.
- Although reviewed studies generally showed positive results for the measured outcomes, these results primarily came from academic research studies that evaluated programs focused on individual establishments and were implemented under favorable conditions (e.g., intensive training programs, short follow-up times). Because of these limitations, further evidence is necessary to assess the public health impact of sustainable, community-wide RBS training programs.
